

1 Data Safety & Overview

Your Data Is 100% Protected: All 300+ inventory items, 1,000+ customers, prescriptions, sales history, and invoices are fully bundled into a single secure backup file (.dump). Deleting or reinstalling the application will not lose any data as long as you follow this guide.

Data Category	What Is Included in the Backup
Inventory / Products (300+)	Frames, lenses, contact lenses, accessories, stock levels, buy/sell prices, movements.
Customers (1,000+)	Full names, mobile numbers, addresses, visit histories, loyalty records.
Clinical / Prescriptions	Eye test parameters (Sphere, Cylinder, Axis, Addition, VA) for all customer visits.
Billing & Financials	Tax invoices, GST calculations, order status, discount allocations, payment receipts.
Store Configuration	Store name, receipt settings, Owner login, staff user accounts.

2 Google Drive Cloud Sync Setup (Recommended & Easiest)

By linking Google Drive on your computer, your backups are automatically uploaded to the cloud the moment you click Save in Optics CRM.

Step A: One-Time Google Drive Setup

- 1 Install **Google Drive for Desktop** from google.com/drive/download.
- 2 Log in with your Gmail / Google account.
- 3 Windows creates a Drive folder (e.g., G:\My Drive or Google Drive).
- 4 Inside it, create a new folder: **Optics CRM Backups**.

Step B: Saving to Google Drive

- 1 Open **Optics CRM** and log in as **Owner**.
- 2 Go to **Settings** → **Desktop backups**.
- 3 Click the green **"Save backup"** button.
- 4 Select your **Optics CRM Backups** folder inside Google Drive.
- 5 Click **Save**. Google Drive syncs it to cloud immediately!

Double Protection: Optics CRM also automatically maintains a local backup on your computer (inside %APPDATA%\Optics CRM\backups). This means you always have both a **local copy** and a **cloud copy**!

3 Reinstallation & How to Restore Data

Scenario A: Reinstalling on the SAME Computer

When you uninstall and reinstall on the same PC using the installer from desktop/release:

- 1 The installer preserves your local data folder automatically.
- 2 Open the newly installed app — it will open directly to your **regular Login Screen**.
- 3 Enter your existing Owner email & password. **All 300+ products and 1,000+ customers are immediately there!**

Scenario B: Restoring on a NEW Computer (or after formatting Windows)

When moving to a fresh computer or completely wiped system:

- 1 Install Optics CRM on the new computer and launch it.
- 2 Because it is brand new, you will see the **"Welcome to Optics CRM: Set up your shop"** screen.
- 3 Enter any quick temporary shop name, email, and password to enter the app.
- 4 Go to **Settings** → **Desktop backups**.
- 5 Click **"Restore backup"** and select your **.dump** file (from your USB drive or Google Drive).
- 6 Click **"Restore and restart"** in the confirmation box.
- 7 The app automatically restores all records and restarts.
- 8 On the login screen, enter your **Original Owner Email and Password**.
- 9 **Done!** Everything is restored in full.

4 Important Rules & Mistakes to Avoid

Common Mistake	What to Do Instead
Unplugging USB drive too early	Always wait until you see the confirmation message: <i>"Backup saved. Keep a copy on a separate drive."</i> before removing your flash drive.
Manually copying AppData folder	Do not copy system folders manually. Credentials are encrypted per Windows profile. Always use the built-in "Save backup" button.
Confusing CSV Export with Backup	CSV Export is for viewing data in Excel / filing taxes. To restore software data, always use the .dump file from Desktop backups .
Forgetting the Owner Password	After restoring, you must log in with your original owner password. Keep your password noted in a secure notebook.
